

G.I. Bill subsidies and vocational training after WWII

PATRICK MOLLIGO

PROSEMINAR IN ECONOMIC HISTORY | UCLA

MAY 21, 2024

This project

1. Did tuition subsidies after WWII and Korean War increase enrollment in vocational training?
 - 1944: Servicemen's Readjustment Act (G.I. Bill) + Korean War extension
 - Widescale draft of most men → source of randomization
2. Did local access to education shift veterans into vocational training vis-à-vis college?
 - Black veterans faced segregation
 - Historically Black Colleges and Universities (HBCUs)

Empirical strategy – big picture

Goal: measure G.I. Bill effect on education/training

Challenges:

- (i) Selection into military
- (ii) Don't observe benefit utilization

Solution: Birth cohort \approx benefit eligibility

WWII military service \rightarrow benefit eligibility \rightarrow college education

Bound and Turner (2002), Larsen et al. (2015), Thomas (2017)

Difference from previous studies

- Strong evidence of increased:
 - College education (white)
 - High school attainment
 - Marital sorting
 - Home ownership
 - *Bound and Turner (2002), Stanley (2003), Thomas (2017), Larsen et al. (2015)*

Today: look at vocational (job) training as alternative use of G.I. benefits

New empirical approaches to setting

- Completed training & predicted training (occupation-industry cells)
- Interaction with HBCUs
- Multinomial logit

Variation in veteran status

Education + veteran status

Vocational training + veteran status

Breakdown

G.I. Bill overview

An Act to provide Federal Government aid for the readjustment in civilian life of returning World War II veterans. [...] This Act may be cited as the "Servicemen's Readjustment Act of 1944".

– June 22, 1944, Public Law 346

- Direct cash benefits to individual veterans
 - \$500 for tuition/books + \$50-\$120 monthly stipend
 - Served between Sept. 1940 and July 1947; at least 90 days
 - Min. 1 year training/education → up to 4 years depending on service
- Similar Bill for Korean War (served 1950-1955)

G.I. Bill take up

Utilization of Veterans' Education Benefits

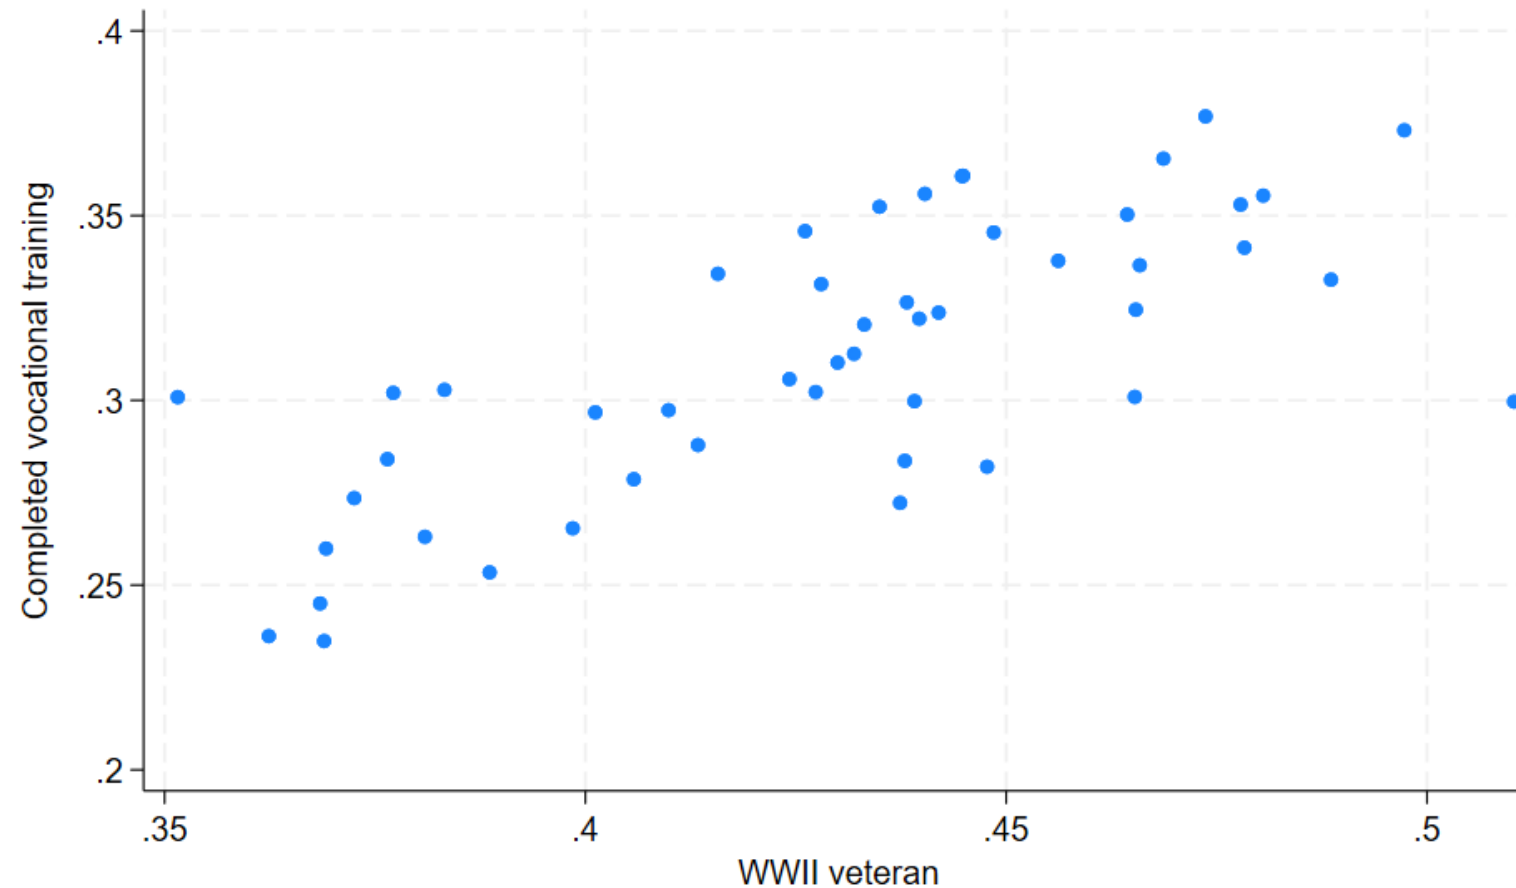

G.I. Bill	Number Eligible	Number of Veterans Enrolled				Program Cost (Billions of Dollars)
		College	Other Schools	On-the-Job Training	Farm Training	
World War II	15,440,000*	2,230,000	3,480,000	1,400,000	690,000	14.5
Korea	5,509,000	1,213,000	860,000	223,000	95,000	4.5
Vietnam	8,200,000	5,100,000	2,500,000	591,000	56,000	42

SOURCE.—U.S. Department of Veterans' Affairs (1999).

* Total veteran population.

Source: Bound & Turner (2002), Appendix B2

Vocation training vs. vet status by state

Empirical model #1

$$Y_{ics} = \beta_0 + \beta_1 * WWII_{cs} + \beta_2 * Korea_{cs} + \beta_3 * State + \beta_4 * Black_i + \beta_5 * Trend + \beta_6 * Trend^2 + e_{ics}$$

Y_{ics} : Education/training attainment

$WWII_{cs}$: fraction served in WWII (birth cohort-state)

$Korea_{cs}$: fraction served in Korean War (birth cohort-state)

State: State of birth dummy

Trend: birth year – 1929 + birth quarter/4

Empirical model #2

Possible complication: G.I. Bill allows college, high school, or job training

Solution: multinomial logit model - relative odds of choosing vocational training

$$\Pr(Y_i = k) = \frac{\exp(Z_{ik})}{1 + \sum_{j=2}^K \exp(Z_{ij})}$$

$$Z_{ik} = \beta_{0k} + \beta_{1k} * \textit{WWII}_{cs} + \beta_{2k} * \textit{Korea}_{cs} + \beta_{3k} * \textit{State} + \beta_{4k} * \textit{Black}_i + \beta_{5k} * \textit{Trend} + \beta_{6k} * \textit{Trend}^2$$

- K alternatives
 - Less than H.S.
 - H.S. (or equivalent) but no vocational training
 - Vocational school
 - College

Public data sources

U.S. Census - 1970 1% samples (IPUMS)

Key variables:

- Vocational training (*SCHLVOC*)
 - Ever completed a vocational training program + main field of training.
 - Special high school programs, apprenticeships, business, nursing, and trade schools, technical institutes, and armed forces schools
- Military service (*VETWWII*, *VETKOREA*)

HBCU data

- Number of HBCUs by county, date founded, date closed

Did the GI Bill increase vocational training?

Alternate ordering

What kind of training?

Table 13: Type of vocational training - Men

	Vocational training	H.S.	Some coll	4 years coll
Business, office work	13.18	12.92	21.80	19.34
Nursing, health fields	2.41	1.70	2.61	6.76
Trades and crafts	56.67	62.30	42.11	27.77
Engineering, drafting, science technician	12.68	10.34	22.05	25.44
Agriculture, home economics	3.59	3.69	2.13	2.77
Other vocational field	5.34	4.45	5.13	9.39
Field not reported	6.14	4.61	4.18	8.53
N	90,750	38,402	14,688	11,747

Birth years 1923-1932. Question from 1970 census on type of vocational program completed.

Alternative measure of vocational school

- Data limitation of 1970 vocational school measure
 - Few observations; not linked to veteran questionnaire; broad measure; single Census year

Construct a more detailed measure

1. Group by occupation-industry-education attainment
2. Compute fraction with vocational training
3. Classify high/low intensity of voc. school

Variation within occupations

Occupation	Industry	Years of school	Fraction vocational training
Carpenters	Fabricated steel products	12	0.51
Carpenters	Fabricated steel products	13	0.76
Carpenters	Fabricated steel products	14	0.82

Variation across industries

Occupation	Industry	Years of school	Fraction vocational training
Carpenters	Misc retail stores	12	0.26
Carpenters	Misc retail stores	13	0.50
Carpenters	Misc retail stores	14	0.20

New outcome variable

Table 14: Effect of WWII service on voc. school intensity (1923-1932 birth cohorts) - State and quarter of birth

	(1)	(2)
	High intensity job	High intensity job (alt)
Fraction WWII	0.00128 (0.00433)	0.00274 (0.00267)
Fraction Korea	0.00172 (0.00551)	0.00388 (0.00344)
Fraction black	-0.00284* (0.00105)	-0.000964 (0.000822)
Fraction black=1 \times Fraction WWII	0.00223 (0.00207)	0.00190 (0.00173)
N	574,628	574,628
Mean dep. var.	0.016	0.010

Std. errors in parentheses, clustered by state-quarter of birth.
